

Drawing Irregular Polygons by Side and Angle Measurements

Jonathan R. Bacolod

A **polygon** is a closed figure made up of straight line segments.

Irregular Polygon

An **irregular polygon** has sides and/or angles that are not all equal.

Drawing a Polygon

When drawing a polygon, follow the given **side lengths** and **angle measures** carefully.

Pentagon

A polygon with 5 sides is called a **pentagon**.
If its sides are not all equal, it is an **irregular
pentagon**.

Hexagon

A polygon with 6 sides is called a **hexagon**.
If its sides are not all equal, it is an **irregular hexagon**.

Octagon

A polygon with 8 sides is called an **octagon**.
If its sides are not all equal, it is an **irregular octagon**.

Decagon

A polygon with 10 sides is called a **decagon**.
If its sides are not all equal, it is an **irregular decagon**.
